

BEXZERO

Consumer Medicine Information (CMI) summary

The [full CMI](#) on the next page has more details. If you are worried about using this medicine, speak to your doctor, nurse or pharmacist.

1. Why am I receiving BEXZERO?

BEXZERO is a vaccine used for the immunisation of children from the age of 2 months and older, adolescents and adults to prevent disease caused by Neisseria meningitidis Group B. Neisseria meningitidis can cause meningitis, a very serious infection.

For more information, see Section [1. Why am I receiving BEXZERO?](#) in the full CMI.

2. What should I know before I receive BEXZERO?

Do not receive if you have ever had an allergic reaction to BEXZERO or any of the ingredients listed at the end of the CMI.

Tell your doctor or nurse if you or your child have an allergy to kanamycin (an antibiotic) or allergy to any other vaccine or you have a very high fever or any other infection.

Talk to your doctor or nurse if you have any other medical conditions, take any other medicines, or are pregnant or plan to become pregnant or are breastfeeding.

For more information, see Section [2. What should I know before I receive BEXZERO?](#) in the full CMI.

3. What if I am taking other medicines?

Some medicines may interfere with BEXZERO and affect how it works.

A list of these medicines is in Section [3. What if I am taking other medicines?](#) in the full CMI.

4. How do I receive BEXZERO?

- Your doctor or nurse will give you BEXZERO as an injection into your upper arm or for children into the upper thigh muscle.

More instructions can be found in Section [4. How do I receive BEXZERO?](#) in the full CMI.

5. What should I know after receiving BEXZERO?

Things you should do	<ul style="list-style-type: none">Keep a record of your immunisation historyIt is important to follow the instructions from your doctor, nurse or pharmacist so that you or your child completes the full course of injections
Driving or using machines	<ul style="list-style-type: none">Be careful before you drive or use any machines or tools until you know how BEXZERO affects you
Looking after your medicine	<ul style="list-style-type: none">BEXZERO will normally be stored at the doctor's clinic or in the pharmacyIf you need to store BEXZERO, keep it in the refrigerator between 2°C and 8°C. Do not freeze. Protect from light.

For more information, see Section [5. What should I know after receiving BEXZERO?](#) in the full CMI.

6. Are there any side effects?

Side effects which have been reported following administration of BEXZERO include pain at the injection site, redness at the injection site, swelling of the skin at the injection site, hardness of skin at the injection site, fever, a general feeling of being unwell, feeling irritable, unusual crying, loss of appetite, painful muscles and joints, headache, nausea, vomiting, diarrhoea, skin rashes and sleepiness.

Allergic reactions have also occurred following administration of BEXZERO. Allergy is rare and severe reactions will usually occur within the first few hours of vaccination. If this occurs go to the Emergency Department of the nearest hospital immediately.

For more information, including what to do if you have any side effects, see Section [6. Are there any side effects?](#) in the full CMI.

BEXZERO

Active ingredient(s): multicomponent meningococcal group B vaccine (recombinant, adsorbed)

Consumer Medicine Information (CMI)

This leaflet provides important information about using BEXZERO. You should also speak to your doctor, nurse or pharmacist if you would like further information or if you have any concerns or questions about using BEXZERO.

Where to find information in this leaflet:

- [1. Why am I receiving BEXZERO?](#)
- [2. What should I know before I receive BEXZERO?](#)
- [3. What if I am taking other medicines?](#)
- [4. How do I receive BEXZERO?](#)
- [5. What should I know after receiving BEXZERO?](#)
- [6. Are there any side effects?](#)
- [7. Product details](#)

1. Why am I receiving BEXZERO?

BEXZERO is a vaccine used for the active immunisation of individuals from 2 months of age and older to help prevent disease caused by *Neisseria meningitidis* serogroup B.

Neisseria meningitidis (meningococcal disease) can cause meningitis (inflammation of the spinal fluid and the tissues that surround the brain) or sepsis (blood poisoning). Meningococcal disease is an infectious disease that is spread from person to person through regular close contact through respiratory droplets. It is a very serious disease and is sometimes fatal. It may cause permanent physical and neurological damage.

BEXZERO can help to protect you or your child from meningococcal disease caused by *Neisseria meningitidis* group B. It is not expected to provide protection against all circulating meningococcal group B types or from meningococcal disease caused by different kinds of microbes.

BEXZERO works by causing your body to produce its own protection (antibodies) against meningococcal bacteria. Your body usually takes a few weeks after receiving the vaccination to develop protection against *Neisseria meningitidis* group B.

If a vaccinated person comes into contact with *Neisseria meningitidis* group B, the body is usually able to destroy it. However, as with all vaccines, 100% protection cannot be guaranteed.

Sometimes individuals may react unfavourably to the vaccine. The chance of a severe reaction from BEXZERO is very small but the risks from not being vaccinated against meningococcal disease may be very serious.

2. What should I know before I receive BEXZERO?

Warnings

Do not receive BEXZERO if you or your child:

- are allergic to BEXZERO, or any of the ingredients listed at the end of this leaflet.
- Always check the ingredients to make sure you can use this medicine.

Check with your doctor or nurse if you or your child:

- are allergic to kanamycin, an antibiotic. If present, the level of kanamycin in the vaccine is low.
- have had an allergic reaction or become unwell after receiving any other vaccine.
- have a severe infection with a high temperature.

In this case vaccination with BEXZERO may have to be delayed. A minor infection such as a cold should not be problem however talk to your doctor or nurse about this before being vaccinated.

- have any other medical conditions including any that involve your immune system

Little is known about the effectiveness of BEXZERO when administered to individuals with weakened immunity due to the use of immunosuppressive medications or genetic disorders of the body's natural defence system. It is possible the effectiveness of BEXZERO could be reduced in such individuals.

- take any medicines for any other condition
- have a condition that affects part of the immune system, such as certain complement deficiencies or receive treatment (such as eculizumab) that blocks complement activation. Individuals could remain at risk of *Neisseria meningitidis* group B infection even after vaccination with BEXZERO.

If your child was born prematurely (before or at 28 weeks gestation), particularly if they had breathing difficulties, please tell your doctor. Stopping breathing or irregular breathing for a short time may be more common in the first 3 days following vaccination in these babies and they may need special monitoring.

The safety and efficacy of BEXZERO in adults over the age of 50 has not been established. There are limited data on the use in patients with chronic medical conditions.

You may be at risk of developing certain side effects. It is important you understand these risks and how to monitor for them. See additional information under Section [6. Are there any side effects?](#)

Pregnancy and breastfeeding

Check with your doctor if you are pregnant or intend to become pregnant.

Talk to your doctor if you are breastfeeding or intend to breastfeed.

They will discuss with you the benefits and risks of receiving BEXSERO during pregnancy or whilst breastfeeding.

Fainting

Fainting can occur following, or even before, any needle injection. Tell the person giving you your injection if you or your child have ever fainted with a previous injection.

3. What if I am taking other medicines?

Tell your doctor or pharmacist if you are taking any other medicines, including any medicines, vitamins or supplements that you buy without a prescription from your pharmacy, supermarket or health food shop.

Some medicines may interfere with BEXSERO and affect how it works.

Tell your doctor or nurse if you or your child have had any vaccines recently.

BEXSERO may be given at the same time as other vaccinations.

Other vaccines must be injected into a different arm or leg from the site of the BEXSERO injection. These include any of the following vaccine components:

- diphtheria, tetanus, whooping cough (pertussis), Haemophilus influenzae type B, polio, hepatitis B, pneumococcal, measles, mumps, rubella, chickenpox and meningococcus A, C, W and Y.

Your doctor or nurse may ask you to give your child medicines that helps to lower fever (a common side effect). This will help to reduce some of the side effects of BEXSERO.

Check with your doctor, nurse or pharmacist if you are not sure about what medicines, vitamins or supplements you are taking and if these affect BEXSERO.

4. How do I receive BEXSERO?

How much is given

- The dose is 0.5 mL
- You or your child may be given more than one single dose of BEXSERO. Talk to your doctor, nurse or pharmacist for more information.

How it is given

- BEXSERO is injected into your upper arm or in children it can be given into the thigh muscle
- It should not be injected directly into a blood vessel or into or under the skin

If you are given too much BEXSERO

If you think that you have been given too much BEXSERO, you may need urgent medical attention.

You should immediately:

- phone the Poisons Information Centre (**by calling 0800 POISON or 0800 764 766**), or
- contact your doctor, or
- go to the Emergency Department at your nearest hospital.

You should do this even if there are no signs of discomfort or poisoning.

5. What should I know after receiving BEXSERO?

Things you should do

- keep a record of your/your child's vaccination history
- it is important to follow the instructions from your doctor, nurse or pharmacist so that you or your child completes the full course of injections

Driving or using machines

Be careful before you drive or use any machines or tools until you know how BEXSERO affects you.

No studies on the effects on the ability to drive and use machines have been performed.

Looking after your medicine

- BEXSERO will usually be stored at the doctor's clinic or at the pharmacy.
- If you need to store BEXSERO it is important to keep it in the refrigerator between 2°C and 8°C.
- Keep BEXSERO in the carton to protect it from light.
- **DO NOT FREEZE BEXSERO. FREEZING THIS MEDICINE WILL DESTROY THE VACCINE.**

Follow the instructions in the carton on how to take care of your medicine properly.

Store it in a cool dry place away from moisture, heat or sunlight; for example, do not store it:

- in the bathroom or near a sink, or
- in the car or on window sills.

Keep it where young children cannot reach it.

Getting rid of any unwanted medicine

If you no longer need to use this medicine or it is out of date, take it to any pharmacy for safe disposal.

Do not use this medicine after the expiry date.

6. Are there any side effects?

All medicines can have side effects. If you or your child do experience any side effects, most of them are minor and temporary. However, some side effects may need medical attention.

See the information below and, if you need to, ask your doctor, nurse or pharmacist if you have any further questions about side effects.

Your doctor or nurse might ask you to remain for observation following your vaccination.

Less serious side effects

Less serious side effects	What to do	
<p>All age groups:</p> <p>Common:</p> <ul style="list-style-type: none"> General disorders and administration site conditions: fever (38°C or higher), pain at the injection site, redness at the injection site, swelling of the skin at the injection site, hardness of skin at the injection site, generally feeling unwell, feeling irritable Nervous system disorders: headache Musculoskeletal and connective tissue disorders: painful joints 	<p>Speak to your doctor if you have any of these less serious side effects and they worry you.</p>	<p>child receives the vaccination, ask your doctor about the risks of fever and how to treat it, including what to do if fever does not respond to initial treatment.</p>
<p>Infants, toddlers and children up to 10 years of age:</p> <p>Very common:</p> <ul style="list-style-type: none"> General disorders and administration site conditions: fever (38°C or higher), tenderness at the injection site (including severe tenderness at the injection site resulting in crying when injected limb was moved), redness of skin at the injection site, hardness of skin at the injection site, swelling of skin at the injection site, feeling irritable Metabolism and nutrition disorders: loss of appetite Nervous system disorders: sleepiness, headache, unusual crying Gastrointestinal disorders: vomiting (uncommon after booster), diarrhoea Musculoskeletal and connective tissue disorders: painful joints Skin and subcutaneous tissue disorders: skin rash in toddlers (uncommon after booster) <p>Common:</p> <ul style="list-style-type: none"> Skin and subcutaneous tissue disorders: skin rash in infants and children aged 2 to 10 years General disorders and administration site conditions: fever (39.5°C or higher) <p>The incidence of fever may be decreased by the use of paracetamol. Serious side effects

Serious side effects	What to do
<ul style="list-style-type: none"> Immune system disorders: allergic reaction <p>Signs of an allergic reaction include:</p> <p>swelling of the limbs, face, eyes, inside of the nose, mouth or throat</p> <p>shortness of breath, breathing or swallowing difficulties</p> <p>hives, itching (especially of the hands or feet), reddening of the skin (especially around the ears) or severe skin reactions</p> <p>unusual tiredness or weakness that is sudden and severe</p> <p>Allergy to BEXSERO is rare. Severe reactions will usually occur within the first few hours of vaccination. If this occurs go to the Emergency Department of the nearest hospital immediately.</p>	<p>Call your doctor straight away, or go straight to the Emergency Department at your nearest hospital if you notice any of these serious side effects.</p>

Serious side effects	What to do
Infants, toddlers and children up to 10 years of age: Uncommon: <ul style="list-style-type: none"> General disorders and administration site conditions: high fever (40°C or higher) Nervous system disorders: seizures (including febrile seizures due to fever) Skin and subcutaneous tissue disorders: dry skin, paleness (rare after booster) Rare: <ul style="list-style-type: none"> Skin and subcutaneous tissue disorders: itchy skin, skin rash Vascular disorders: Kawasaki disease – symptoms may include fever that lasts more than 5 days associated with a rash on the trunk of the body and sometimes followed by a peeling of the skin on the hands and fingers, swollen glands in the neck, red eyes, lips, throat, tongue 	Call your doctor straight away, or go straight to the Emergency Department at your nearest hospital if you notice any of these serious side effects.

Side effects reported during marketed use include:

- Blood and lymphatic system disorders: enlarged lymph nodes
- Immune system disorders: allergic reactions
- Nervous system disorders: collapse, sudden onset of muscle floppiness, less responsive than usual or a lack of awareness, feeling faint or fainting
- Skin and subcutaneous tissue disorders: paleness or bluish skin discolouration in young children, skin rash, fever (adolescents from 11 years of age and adults)
- General disorders and administration site conditions: injection site reactions like extensive swelling of the vaccinated limb, blisters at or around the injection site and hard lump at the injection site (which may persist for more than one month)

Tell your doctor, nurse or pharmacist if you notice anything else that may be making you feel unwell.

Other side effects not listed here may occur in some people.

Reporting side effects

After you have received medical advice for any side effects you experience, you can report side effects via <https://pophealth.my.site.com/carmreportnz/s/>. By reporting side effects, you can help provide more information on the safety of this medicine.

7. Product details

What BEXZERO contains

Active ingredients (main ingredients)	Neisseria meningitidis Group B factor H binding protein fusion protein – 50 micrograms Neisseria meningitidis Group B Neisseria adhesin A protein – 50 micrograms Neisseria meningitidis Group B Neisseria heparin binding antigen fusion protein – 50 micrograms Neisseria meningitidis serogroup B outer membrane vesicles – 25 micrograms
Other ingredients (inactive ingredients)	aluminium hydroxide histidine sodium chloride sucrose water for injections

Do not take this medicine if you are allergic to any of these ingredients.

What BEXZERO looks like

BEXZERO is a white, opalescent liquid suspension for injection, supplied in a 0.5 mL pre-filled syringe.

BEXZERO is available in a 1 or 10 pack.

Not all presentations and pack sizes may be marketed.
